

**Breast cancer victor
and all-around super hero.**

Solutions

Tegra Medical makes it possible.

At Tegra Medical we use our “super powers” to create medical devices — including products for women’s health. We’re innovative problem-solvers who work with you to get your product to market, whether you need needles for breast biopsies or devices for gynecological surgery.

Our range of expertise includes tools and complex assembled devices for arthroscopy, spine, neurosurgery, cardiac, orthopaedics, drug delivery, oncology, neurosurgery, gastrointestinal, laparoscopy, ophthalmology, endoscopy, urology and much more.

The growth path of your device might start with our GENESIS Tech Center®, where we help nurture your designs with prototyping and pilot production, then progress to full-scale production, and end with final assembly, packaging and sterilization. We infuse robust quality procedures into every step.

Providing ingenious solutions for women’s health and many other medical-device challenges is just one of the hallmarks of Tegra Medical, along with speed, service and quality.

Where medical devices come to life.
